

# A must-have ERP system for the clothing industry

Locally developed software that manages your clothing business from style creation and orders to production, stock and accounts.

## StyleMaster

- Management of styles by a unique size and colour matrix.
- Access information by season, department, garment, group and product.
- Control and allocate stock with picking, invoicing, adjustments and rejects.
- Increase your stock turns and profitability with accurate information in real time.
- Capture orders quickly and easily over various seasons.
- Improve delivery of orders to customers.

## CutMaster: bill of materials & production

A full bill of materials system for each style, including ratings, contrast on parts, trims, outwork, packaging and overheads. Integrated with the order system to automatically generate cut sheets. Work-in-progress status tracks styles and orders, with cut sheet issue and raw material requisitions, plus cost-back analysis detailing variance on costs.

## FabricMaster

Manage and control fabric stock by type, age, dye-lots and grades. Each roll is individually tracked (barcoded), providing full usage information. Track purchases by supplier and stock in transit.

## TrimMaster

Manage and control all trimmings and outwork (embroidery, printing and more) by type, trim code and colour. Track purchase orders by supplier.

### AgentMaster: B2B ordering

A B2B app that lets sales reps and business clients place orders directly into StyleMaster. What is available updates in real time, so nobody sells stock you don't have.

### Baywood Dashboards

Dashboards for products, fabrics, trims and accounting, in graphic and table form:

- Stock movement under various groupings, and stock positions.
- Year-on-year comparisons.
- Financial KPIs: receivables, payables, income statement, balance sheet and sales trends.

### BASE: Baywood Accounting Suite

A full accounting package including receivables, payables, invoicing, general ledger and cash book, integrated with StyleMaster. Easy to use, with user restrictions and standard reports (current ledger, age analysis, trial balance, income statement).
